

Human Connectome Project

January 30, 2017

Dear

We cordially invite you to attend the 2017 Human Connectome Project Course: Exploring the Connectome (HCP Course 2017, <http://store.humanconnectome.org/courses/2017/>), which will be held June 19-23, 2017 at the University of British Columbia (UBC), in Vancouver, BC, Canada.

The purpose of the Human Connectome Project (HCP) is to advance the understanding of anatomical and functional organization in the healthy young adult human brain. The HCP is using cutting-edge neuroimaging to map brain connections in healthy adults, children, and older adults and sharing all data, processing methods, and analysis tools with the scientific community. The 2017 Human Connectome Project Course is bringing together scientists of various backgrounds who are engaged in investigations relevant to human brain organization for an intensive educational course on the data and methods being developed by the HCP for studying human brain connectivity.

This invitation does not include any financial support for travel, registration fees or local expenses relative to the HCP 2017 Course.

Please feel free to inform us if you have any questions and/or additional requests.

We look forward to seeing you in Vancouver!

Sincerely,

Jennifer Elam, Ph.D.
HCP Outreach Director
